Quality Management System

QCGC is dedicated to maintaining its reputation for consistently producing timely and cost effective projects. As part of our daily work practices we strive to integrate our quality management systems throughout all operations. Combining years of experience in the construction and mining fields, the QCGC team is committed to quality outcomes, Quality Management is simply part of the QCGC mindset.

Each project's Quality Management Plan (QMP) outlines processes for upholding quality requirements for all works undertaken by QCGC. We ensure that:

- QCGC products and services will meet our clients' requirements
- Purchased items conform to specification before incorporating them in the works
- Detailed planning and control measures across all work processes
- Verification that effective work processes have been incorporated and that all completed work is aligned with the contract agreement
- We have a strict criteria when selecting subcontractors and confirm that all work complies with the contract agreement
- Ownership and rectification of any non conforming work and subsequent improvement of work processes to prevent any future recurrence. Detailed document management and record keeping
- Ongoing improvement of procedures and work practices in order to mitigate errors, waste and product faults or non compliance.

All project management and site personnel receive induction training on the Project Quality Plan ensuring the QCGC quality mindset is instilled from the start. Site staff are also trained in the technical procedures including the requirements of Inspection and Test Plans.
